VibeConnect Master Database and Authentication

1. Sabse simple example

VibeConnect ko ek school building samjho:

- Master Console = School ka main gate
- Master Database = Gatekeeper ka main register
- SSO = Ek special entry pass
- LMS, HRMS, VMS = Alag-alag classrooms
- Product databases = Har classroom ki apni notebook

Main register batata hai:

```
Rahul kaun hai?
Rahul kis company ka hai?
Rahul ko kaunsa room allowed hai?
```

LMS ki notebook batati hai:

```
Rahul Learner hai ya Admin?
Rahul ke courses kaunse hain?
Uski progress kitni hai?
```

2. Master Database Structure

3. organizations

Company ka main record:

```
Organization ID
Organization Code
Organization Name
Description
Status
Created By
Updated By
Created Date
Updated Date
```

Example:

```
Company: ABC Limited
Code: abc-limited
Status: Active
```

Meaning: ABC Limited VibeConnect mein registered company hai.

4. products

Available applications ka register:

```
Product ID
Product Code
Product Name
Description
Status
SSO configuration
```

Example:

```
lms  → Learning Management System
hrms → Human Resource Management System
vms  → Vendor Management System
```

Is table mein product ke users ya business data nahi rahega.

5. platform_users

Central login karne wale har person ki minimum identity:

```
User ID
Full Name
Email or Username
Password Hash
Account Status
Email Verified
Last Login
Locked Until
Created Date
Updated Date
```

Example:

```
User: Rahul
Email: rahul@abc.com
Status: Active
```

Password readable form mein store nahi hoga. Sirf secure password hash store hoga.

6. organization_memberships

User kis company ka member hai:

```
Membership ID
User ID
Organization ID
Membership Type
Status
Joined Date
Ended Date
```

Example:

```
Rahul → ABC Limited → Active Member
```

Is mapping ke bina system ko nahi pata chalega ki Rahul kis company ka user hai.

7. organization_product_entitlements

Company ko kaunsa product mila hai:

```
Entitlement ID
Organization ID
Product ID
Status
Enabled Date
Expiry Date
Suspended Date
```

Example:

```
ABC Limited → LMS  → Active
ABC Limited → HRMS → Active
ABC Limited → VMS  → Not Purchased
```

Agar company ke paas LMS hi nahi hai, toh company ke kisi user ko LMS access nahi diya ja sakta.

8. user_product_assignments

Particular user ko kaunsa product allowed hai:

```
Assignment ID
User ID
Organization ID
Product ID
Product User ID
Status
Assigned By
Assigned Date
Suspended Date
```

Example:

```
Rahul → ABC Limited → LMS → Active
Rahul → ABC Limited → HRMS → No Assignment
Rahul → ABC Limited → VMS → No Assignment
```

Isi table se Central Console ko pata chalega:

“Rahul ko sirf LMS dikhana hai.”

Product User ID Rahul ke LMS database record ka ID hoga.

9. Master DB aur Product DB ka relation

Master DB mein rahega:

```
Rahul is allowed to open LMS.
```

LMS DB mein rahega:

```
Rahul is a Learner.
Rahul has Course A.
Rahul completed 60%.
```

10. Authentication kahan banega?

Level 1: Central Authentication

Central VibeConnect par banega:

```
Login
Password verification
MFA
Account lock
Central session
Organization check
Product access check
SSO code creation
Central logout
```

Iska kaam:

User kaun hai aur usko kaunsa product kholna allowed hai?

Level 2: Product Authentication

LMS, HRMS aur VMS mein alag secure session banega.

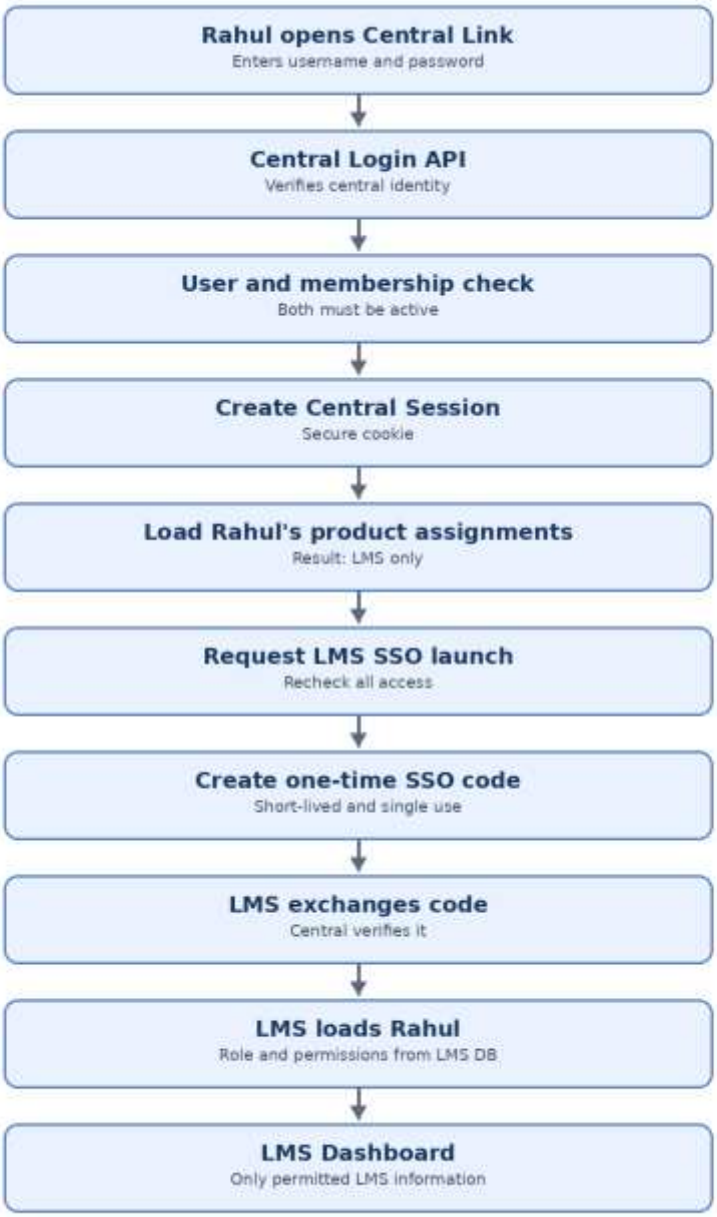

LMS ka kaam:

```
Central SSO code verify karna
LMS user find karna
LMS role load karna
LMS session cookie create karna
LMS permissions apply karna
```

Iska kaam:

LMS ke andar user kya dekh aur kar sakta hai?

11. Complete Login Flow

12. Kaunsi APIs hit hongi?

Rahul ko sirf LMS access hai.

Central login ke time

```
POST /api/v1/auth/login/
GET /api/v1/auth/me/
GET /api/v1/me/products/
```

Ye APIs Master Database check karengi.

Result:

```
{
  "user": "Rahul",
  "organization": "ABC Limited",
  "products": ["lms"]
}
```

LMS open karte waqt

```
POST /api/v1/sso/launch/lms/
POST /api/v1/sso/exchange/
```

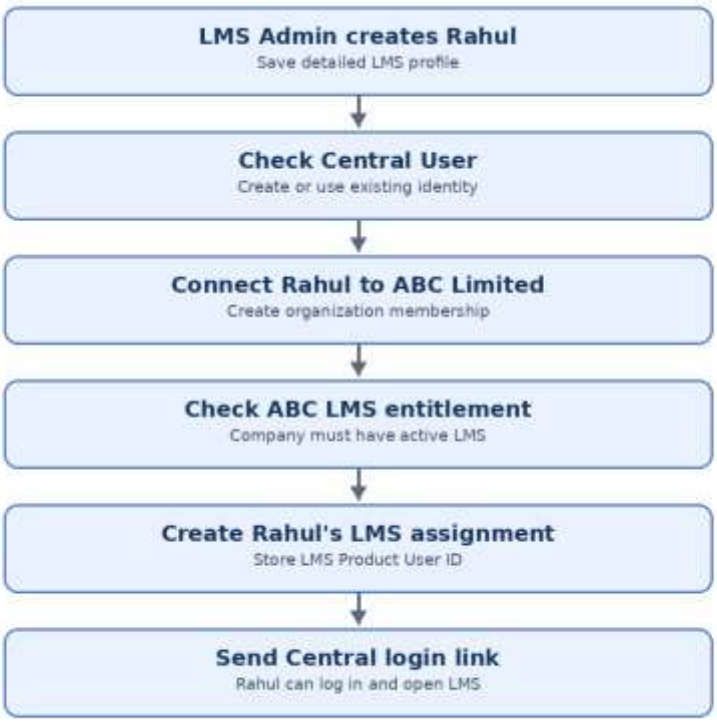

Uske baad LMS apni APIs call karega:

```
GET /api/lms/me/
GET /api/lms/my-courses/
GET /api/lms/my-progress/
```

HRMS aur VMS APIs hit nahi hongi.

```
LMS access hai     → LMS API hit hogi
HRMS access nahi   → HRMS API hit nahi hogi
VMS access nahi    → VMS API hit nahi hogi
```

13. LMS user onboarding

14. Authentication ka simple final meaning

```
Central Authentication:
Rahul kaun hai?
```

```
Rahul kis company ka hai?
Rahul ko LMS allowed hai?

LMS Authentication:
Rahul ka LMS account kaunsa hai?
Rahul Learner hai ya Admin?
Rahul LMS ke andar kya kar sakta hai?
```

Central system ek gatekeeper hai. LMS ek classroom teacher hai.

Gatekeeper kahega:

Rahul LMS classroom mein ja sakta hai.

LMS teacher kahega:

Rahul Learner hai, isliye usko sirf uske courses dikhane hain.

VibeConnect Master Database — Implementation Schema

Central identity, organization, product access, SSO, audit and privacy tables
